DATE MAILED: 02/23/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/841,210

Applicant(s)

SHIN, BONG-HO

Examiner

Jonathan G. Sterrett

Art Unit

3623

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 24 April 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-14 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-14 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

Summary

1. Claims 1-14 are pending in the application.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1- 6 and 9-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Von Kohorn US 5,759,101 in view of Gerace US 5,848,396.

Regarding Claim 1, Kohorn teaches:

inputting a plurality of subjects to be surveyed and information related thereto (column 76 line 61-67, information related to a plurality of interest areas can be inputted and stored in memory);

providing the plurality of subjects and the information to the participant (column 76 line 40-47, televised program transmitted plus answering instructions);

selecting a subject among the plurality of subjects at the participant (column 76 line 24-26, participants can choose the area of interest);

inputting a betting amount to said selected subject at the participant and transmitting the selection and the betting amount (column 12 line 6-8, invention is applicable to making, evaluation and rewarding of predictions; column 15 line 17-23,

betting based on prediction of event, such as sports game or card game; column 72 line 47-49, participants may choose a specific event and specify the amount the wish to bet) and;

counting the number of selections for each of the subjects during a predetermined term to choose a subject receiving the most number of selections (column 24 line 31-43, invention can be used to track peoples' responses to products, services, and other subjects of surveys);

paying a dividend proportional to the betting amount to the participants selecting the subject receiving the most number of selection clicks (column 72 line 45-53, users can bet on the outcome of an event, including polls and surveys and a subject which received the most betting amount; column 45 line 20-24, award or prize won is computed in accordance with the response criteria, including proportional to the inputted betting amount. The concept of a dividend being proportional to inputted betting amount is also old and well known in the art);

analyzing a preference degree for each of the plurality of subjects based on the number of selection clicks for each of the plurality of subjects (column 14 line 63-66, results produced by surveys can be scored and statistically analyzed; column 20 line 45-49 survey response data can be analyzed; column 20 line 51-55, answered questions from survey can be processed);

analyzing a preference strength for each of the plurality of subjects based on the sum of the betting amount for each of the plurality of subjects (column 14 line 26-31,

scoring includes analyzing and processing responses; column 72 line 51-53, outcome of wager is capable of being defined in terms of scores and other measurements).

Kohorn does not teach:

a step for inputting and storing a plurality of subjects desired to survey and information related thereto to said server computer ,

a step for indicating said stored plural subject and information related thereto to participant computer connected to said server computer and selecting one subject among plural subjects by participant,

Gerace teaches:

a step for inputting and storing a plurality of subjects desired to survey and information related thereto to said server computer (Figure 2 #27, web server; column 11 line 57-63, sponsor advertisements stored);

a step for indicating said stored plural subject and information related thereto to participant computer connected to said server computer and selecting one subject among plural subjects by participant (column 7 line 30-31, advertisements are stored as objects on computer and can be displayed and selected by participant on computer web page).

Gerace teaches that the Internet allows users worldwide to immediately be informed of what is happening in the world without having to wait to be informed by slower means of communication (column 1 line 52-60, business are offering information on the internet that is near real-time, with a 15 minute delay). Gerace also teaches that

the internet became interactive in 1994, with the capability of 'forms', where users could enter information to be sent back to the web site.

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the teachings of Kohorn, as discussed above, with the teachings of Gerace, because it would provide users the ability to interact worldwide with surveys that allowed the users to select subjects and place bets.

Regarding Claim 2, Kohorn teaches analyzing a preference strength of an individual participant for the selected subject based on the amount of betting to the selected subject (column 14 line 26-31, scoring includes analyzing and processing responses; column 72 line 51-53, outcome of wager is capable of being defined in terms of scores and other measurements).

Regarding Claim 3, Kohorn teaches wherein said step wherein said step of analyzing a preference strength includes a step of analyzing a preference strength for each surveying subject by average betting amount per participant to each of the plurality of subjects and dispersing a proportional part of the betting amount. (column 14 line 26-31, scoring includes analyzing and processing responses; column 72 line 51-53, outcome of wager is capable of being defined in terms of scores and other measurements; column 93 line 15-17, lower nonzero scores awarded to players of a wager; column 93 line 17-20, average is calculated; column 93 line 30-33, dispersing amount is calculated by multiplying scores by amounts to be awarded, including dispersing a proportional part of betting amount).

Regarding Claim 4, Kohorn teaches inputting a plurality of subjects to be surveyed and information related thereto at the participant computer (column 76 line 21-26, contestants can choose from specific types of categories of questions; column 76 line 40-46, televised program transmits answering instructions and scoring criteria for answering questions).

Kohorn does not teach transmitting the plurality of subjects and the information related thereto to the server computer.

Gerace teaches transmitting the plurality of subjects and the information related thereto to the server computer (Figure 2 #27, web server; column 11 line 57-63, sponsor advertisements stored; column 7 line 30-31, advertisements are stored as objects on computer and can be displayed and selected by participant on computer web page).

Gerace teaches that the Internet allows users worldwide to immediately be informed of what is happening in the world without having to wait to be informed by slower means of communication (column 1 line 52-60, business are offering information on the internet that is near real-time, with a 15 minute delay and slower forms of communication can take up to 12 hours to disseminate). Gerace also teaches that the internet became interactive in 1994, with the capability of 'forms', where users could enter information to be sent back to the web site.

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the teachings of Kohorn, as discussed above, with the teachings of

Gerace, because it would provide users the ability to interact worldwide with surveys that allowed the users to select subjects and place bets.

Regarding Claim 5, Kohorn teaches a step a step for providing predetermined compensation to a participant who inputted the subject which received most number of selections (column 13 line 65- column 14 line 2, dispensers can reward winners with gold stars or other tokens, winners consisting of those who have provided answers meeting predetermined response criteria).

Kohorn does not teach 'clicks'. Furthermore, it is well settled that it is not "invention" to broadly provide a mechanical or automatic means to replace manual activity which has accomplished the same result. In re Venner, 120 USPQ 192.

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the teachings of Kohorn, as discussed above, with providing means to use clicks to denote the inputting of a subject, because it would automate the inputting of a selection.

Regarding Claim 6, Kohorn teaches selecting a predetermined number of survey subjects among the plurality of survey subjects inputted during the predetermined term (column 76 line 61-67, information related to a plurality of interest areas can be stored in memory; column 76 line 40-47, televised program transmitted plus answering instructions; column 76 line 24-26, participants can choose the area of interest).

Regarding Claim 9, Kohorn teaches wherein the betting is made with cyber money (column 73 line 33-43, a bettor's credits and debits can be automatically debited to and credited from the bettor's bank account using signals sent over telephone wires).

Regarding Claim 10, Kohorn teaches wherein said dividend is paid with cyber money (column 73 line 27-32, winning bet results in magnetized card being generated; column 73 line 33-43, a bettor's credits and debits can be automatically debited to and credited from the bettor's bank account using signals sent over telephone wires).

Regarding Claim 11, Kohorn teaches wherein said plurality of particular subjects to be surveyed are plurality of different brands of a single type of commodity (column 24 line 44-49, consumer research can be done to determine buyer responses to products and services, including different brands of a single type of commodity).

Regarding Claim 12, Kohorn and Gerace teaches all the limitations above except for:

counting a sum of betting amounts for each of the plurality of subjects during a predetermined period of time to choose a subject receiving the most amount of betting (column 93 line 34-35, in the case of computing the scores in horse racing gambling, the computer calculates the total amount wagered for each horse in order to determine which horse received the most amount of betting and then to calculate payouts based on the betting amounts);

a step for paying a dividend proportional to inputted betting amount to participants who selected the subject receiving the most amount of betting (column 72 line 45-53, users can bet on the outcome of an event, including polls and surveys and a subject which receives the most amount of betting; column 45 line 20-24, award or prize won is computed in accordance with the response criteria, including proportional to the inputted betted amount).

Regarding Claim 13, Kohorn teaches wherein said plural particular subjects desired to survey are a rising trend, steadiness, and dropping trend of any stock (column 68 line 46-48, system lends itself to conducting tasks involving predictions of the outcome of future events, including the rising trend, steadiness, and dropping trend of any stock).

Regarding Claim 14, Kohorn teaches wherein said particular term is from any time after closing of stock market up to any time before opening of next stock market (column 68 line 46-48, system lends itself to conducting tasks involving predictions of the outcome of future events, including a term that is from any time after closing of stock market up to any time before opening of next stock market).

3. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Von Kohorn US 5,759,101 in view of Gerace US 5,848,396 and further in view of the history of US quiz and game shows during the late 1940's and 1950's as discussed in the following document: Hoerschelmann, Olaf, "Quiz and Game Shows", www.museum.tv/achives/etv/Q/quizandgame/quizandgame.htm, hereafter referred to as Reference A.

Regarding Claim 7, Kohorn teaches a step for paying a premium or predetermined amount of cyber money to a participant (column 24 line 55-57, respondents to surveys are rewarded by the issuing of certificates, coupons or the like to them). Kohorn does not teach paying a premium for a participant who inputted the subject to be surveyed and information related thereto.

The concept of rewarding participants who inputted a subject to be surveyed and information related thereto is old and well known in the art, as evidenced by Hoerschelmann (Reference A page 2 paragraph 2 line 9-14). During quiz shows of the 1940's and 1950's in the US, viewers were rewarded with prizes (money or consumer goods) for submitting questions that were used on the air.

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the collective teachings of Kohorn and Gerace, as discussed above, with rewarding participants who inputted the subject to be surveyed and information relating thereto, because it would provide a means to incorporate input from participants and thus increase the degree of audience participation and thus increase the a show's ratings.

4. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Von Kohorn US 5,759,101 in view of Gerace US 5,848,396 and further in view of AllAdvantage.com as discussed in the following document: web.archive.org, alladvantage.com, May 8, 1999 p.1, hereafter referred to as Reference A.

Regarding Claim 8, Kohorn does not teach a step of paying a predetermined amount of cyber money to a member at a time when a participant joins as a member of said web site. Alladvantage.com teaches a step in of paying a predetermined amount of cyber money to a member at a time when a participant joins as a member of said web site (Reference A page 1 line 1-4, website pays web surfers and advertises joining now to earn money when a person is on the web). Alladvantage teaches providing

participants compensation in order to encourage online browsing and shopping
(Reference A page 1 line 6-7).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the collective teachings of Kohorn and Gerace, as discussed above, with paying predetermined amount of cyber money to a member at a time when a participant joins as a member of said web site, as taught by alladvantage.com, because it would provide participants an incentive to perform online browsing and shopping and improve the visitation and shopping rate of those retailers who had websites on the Internet.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US 5,057,905 by Kohorn discloses a system and method for attracting shoppers to sales outlets.

US 6,070,145 by Pinsley discloses respondent selection method for network-based survey.

US 5,586,937 by Menashe discloses interactive computerized gaming system with remote terminals.

US 5,950,172 by Klingman discloses secured electronic rating system.

US 5,283,734 by Kohorn discloses a system and method of communication with authenticated wagering participation.

US 5,034,807 by Kohorn discloses a system for evaluation and rewarding of responses and predictions.

US 6,435,511 by Vancura discloses apportionment of pay out of casino game with progressive account.

US 5,583,763 by Atcheson discloses a method and apparatus for recommending selections based on preferences in a multi-user system.

US 4,355,372 by Johnson discloses a market survey data collection method.

US 6,175,833 by West discloses a system and method for interactive live online voting.

US 6,256,614 by Wecker discloses an internet system for producing electronic reward cards.
